(a)
price of 30 yr: 0.07–0.32 K per e-fold
10^4 yr ceiling:
arrows = lower bounds
acetate dial, f = 0
acetate dial, f = 0.5
habitat spread, d = 10^−4 yr^−1
habitat spread, d = 10^−3 yr^−1
30 yr
Critical response time τc (yr)
exact, cooling branch (36)
exact, unstable at τ = 0 (6)
on/off graded, lower bound (42)
resolved habitats, lower bound (71)
resolved habitats, finite (9)
S = 0
Local sensitivity |S| (K per e-fold of supply)
(b)
uniform coexistence
σ = 8 K
uniform, σ = 0
1 K
3 K
6 K
(a): 30 yr at σ = 0.02–0.06 K
Surface temperature T (K)
Hydrogen supply potential P
